

Software Developer

Location: Montreal, QC.

Start: ASAP

OmniGlobe Networks (www.omniglobenet.com) is a leading provider of broadband Internet satellite-wireless systems, with software solutions that are designed specifically to perform network management, network monitoring, and bandwidth optimization. OmniGlobe Networks creates and manages 'wireless broadband hot zones', based on WiMax, for remote regions. We have networks and operations in North America, Europe, Africa and the Middle East, each one linked back via satellite to our operations center in Montreal, Canada.

We are seeking a software developer/engineer/programmer with Unix/Linux and web development experience.

Responsibilities

Software programming, testing and documentation

General qualifications

- Good general communication skills
- Good software design skills
- Able to work in a small team
- Technical writing skills for documentation
- Autonomy
- Willingness to perform various tasks related to company operations

Knowledge requirements

- Experience with BSD/Linux/Unix operating systems, Linux GNU development tools and shell scripting (bash, perl, ruby, tcl).
- Experience in software development using Object Oriented design/Object Oriented programming: C, C++, Java and PHP5.
- Knowledge of IP networking and associated protocols: TCP/IP, UDP, NAT, DHCP, DNS, POP/SMTP, P2P, SNMP.
- Experience using versioning systems, automated build and test systems.

Assets

- Experience with Web application development using LAMP, AJAX, Ruby on rails and web-containers such as Tomcat.
- Knowledge of database applications (MySQL, PostgreSQL).
- Knowledge of middleware platforms: J2EE, Corba and Inter process communication.
- Experience in building software distributions using the Red Hat Package Manager and BSD ports collection.
- Knowledge of video and audio streaming over IP: VOIP, SIP, RTP.
- Knowledge of Microsoft networking.
